## Lochinvar® Expands CON•X•US™ Remote Connectivity Platform

Lochinvar successfully introduced the CON•X•US™ remote connectivity platform on the FTXL™ Fire Tube Boiler in 2014 and is now extending its exclusive remote connectivity option to the KNIGHT® Boiler family.

CON•X•US remote connectivity allows most smart devices to be linked with compatible SMART SYSTEM™ boiler controls from around the corner or halfway around the world. Using a wired or wireless connection, CON•X•US offers the ability to login to a boiler, monitor its current status and modify operational settings from a remote location. For example, the user can view the current outdoor air temperature at a connected boiler's location, track the target reset temperature when there is a call for heat and ensure outdoor reset is being utilized properly. CON•X•US will even send a text message or email if an issue with its operating status arises.

Look for the CON•X•US enabled logo which is now available as an optional feature on the KNIGHT family of boilers, as well as the FTXL Fire Tube Boiler!

Lochinvar is kicking off its 2015-2016 VIP Contractor Program and introducing new perks for participants. Launched Oct. 1, the multi-faceted annual program rewards VIP Contractors for their installations of Lochinvar's residential boilers during the upcoming heating season.
