

It's Safe to go back Underground!!

With Blue Duct! Vemco is proud to announce it's representation of Blue Duct!!

Our underground ductwork products are classified as High Density Polyethylene (HDPE), which is a closed cell plastic material with an additional high thermal property. It is unique to other materials because it is manufactured with food grade plastic that is safe for humans and the environment. The material is mixed with a foaming additive during manufacturing to achieve the density and performance parameter desired. NSF Thermal Performance is R-10. The outlet air and exterior duct surface temperatures for the BLUE DUCT system consistently achieved lower and higher temperatures compared to those of the plastic, fiber glass or metal systems.

Thermal conductivity < 0.36–0.52 W/m.K
Density > 940–965 kg/m³
