Energy Efficient Upgrades for Fromberg School District

The Fromberg School District converted their antiquated steam heating system to a hot water system in the summer of 2013. They installed (4) Lochinvar KBN400 94% thermal efficiency boilers with 5 to 1 turndown which is where the energy efficiencies came from. Vemco also furnished Daikin McQuay classroom unit ventilators, ducted fan coil units, cabinet unit heaters, Loren Cook exhaust fans with energy efficient EC motors, and new Taco pumps for hot water circulation for their two buildings. This conversion resulted in greatly improved energy efficiencies, much quieter equipment operation, and an enhanced learning environment. Also it has reduced the costs associated with trying to maintain the outdated steam heating system. The project was started and completed during the summer of 2013 with no disruption to normal school functions.
