Daikin AC meets the challenge at an Idaho Dental Office

Daikin AC highlighted a challenging project in Idaho where there was a tight budget, limited space, and the need for multiple zones. Daikin’s VRV® provided simultaneous heating and cooling, heating capacity, energy efficient zoning and it fit perfectly into the limited space. Wayne Kovash, owner/president of TYKO Mechanical, explained that a tight budget and the existing constraints of the building forced the team to consider all available options. “The challenge was how to condition the space with limited ceiling heights and the existing MEP roughed in already, creating a nightmare to install any kind of ducted HVAC system. Simply put, there was no room for a conventional HVAC ducted system,” says Kovash.

“I would recommend the Daikin system to anyone that needs a highly efficient system that installs very quickly, installs in very limited space requirements and performs as advertised.” Wayne Kovash, owner/president, TYKO Mechanical, LLC

In addition to the energy efficiency and design features offered by Daikin, Kovash explained that having Daikin’s, local representative (Vemco) readily available to assist with design was another deciding factor.

VEMCO Q & A

Q: What is the Model # of the Daikin Heat Recovery VRV Unit Selected for this project?

Prize: $50.00 AMEX gift card

CONGRATS to Mike Nault of Nault Plumbing & Heating who stated that it was Rocky Boy High School that utilized the AcornVac plumbing system and was highlighted in a Case Study.
